ALERTA MEDICA

Tengo la **ENFERMEDAD DE PARKINSON**
que podría hacerme mover lentamente
y tener dificultades para levantarme o hablar.

NO ME ENCUENTRO BAJO LOS EFECTOS DE DROGAS O ALCOHOL.

Por favor llame a mi médico o algun
familiar para pedir ayuda.

1-800-4PD-INFO (473-4636)
www.parkinson.org

Información importante para profesionales de la salud

- Para evitar serias complicaciones, los pacientes con la enfermedad de Parkinson deben tomar sus medicamentos a la misma hora cada día - no posponga o interrumpa su dosis.
- No discontinue abruptamente la terapia con Levodopa.
- Si es necesario un antipsicótico, use quetiapina (Seroquel), clozapina (Clozaril) o pimavanserina (Nuplazid).
- **Alerta Especial:** Medicamentos como las benzodiazepinas, relajantes musculares, medicamentos para control de la vejiga y otros medicamentos para el sueño y el dolor pueden causar confusión, alucinaciones y otros síntomas adversos.

Voltee esta tarjeta para encontrar una lista de medicamentos contraindicados y consideraciones importantes si el paciente tiene un dispositivo cerebral y necesita una Resonancia Nuclear Magnética (RNM), Electrocardiograma (ECG) o Electroencefalograma (EEG).

MEDICAMENTOS Y EXÁMENES DIAGNÓSTICOS QUE PUEDEN ESTAR CONTRAINDICADOS EN PERSONAS CON LA ENFERMEDAD DE PARKINSON

Medicamentos seguros:	Medicamentos a evitar:
ANTIPSICÓTICOS pimavanserina (Nuplazid) quetiapina (Seroquel), clozapina (Clozaril)	Evite todos los demás antipsicóticos típicos o atípicos
MEDICAMENTOS PARA EL DOLOR La mayoría son seguros, pero los medicamentos narcóticos pueden generar confusión, psicosis y estreñimiento.	Si el paciente está tomando un inhibidor de la MAO-B tales como la selegilina o rasagilina (Azilect), evite la meperidina (Demerol)
ANESTESIA Pida una consulta con el anestesiólogo, cirujano y especialista en Parkinson para determinar cuál es la mejor anestesia teniendo en cuenta sus síntomas de Parkinson y sus medicamentos	Si el paciente está recibiendo un inhibidor de la MAO-B tales como la selegilina o rasagilina (Azilect), evite la meperidina (Demerol), tramadol (Rybix, Ryzolt, Ultram), droperidol (Inapsina), metoclopramida (Reglan), Metadose, propoxifeno (Darvón, PP-Cap), ciclobenzaprina (Amrix, Fexmid, Flexeril), halotano (Fluotano)
NÁUSEAS/MEDICAMENTOS GASTROINTESTINALES domperidona (Motilium), trimetobenzamida (Tigan), ondasentrón (Zofrán), dolasetrón (Anzemet), granisetrón (Kytril)	proclorimetazina (Compazine), metoclopramida (Reglan), prometazina (Energán), droperidol (Inapsina)
ANTIDEPRESIVOS fluoxetina (Prozac), sertralina (Zoloft), paroxetina (Paxil), citalopram (Celexa), escitalopram (Lexapro), venlafaxina (Effexor)	amoxyapina (Asendin)

Si usted tiene un dispositivo de Estimulación Cerebral Profunda (ECP), (DBS por sus siglas en inglés), debe tener las siguientes precauciones:

Con la Resonancia Nuclear Magnética (RNM):

- La RNM no se debe realizar a no ser que el hospital tenga experiencia con el dispositivo de ECP.
- La RNM no se debe realizar si el paciente tiene marcapaso abdominal o para analizar estructuras del cuerpo por debajo de la cabeza (por ejemplo: cuello, abdomen, brazos, piernas o aún más bajas) debido a que puede ocurrir un sobrecalentamiento peligroso del marcapaso.

Con el ECG (electrocardiograma) y el EEG (Electroencefalograma):

- Apague el dispositivo de ECP antes de realizar un ECG o un EEG.
- Es conveniente evitar la diatermia.

- Diatermia should be avoided.
 - Under certain conditions, some DBS devices are safe for full-body MRI and do not need to be turned off.
 - Turn off DBS device before conducting EEG or EECG.
 - Always check with your DBS team before having an MRI to make sure the procedure will be safe for you.
 - MRI should never be done if the imaging a DBS device safely.
 - DBS should never be placed anywhere other than the chest or abdomen.
 - MRI should never be done if the device DBS is experiencing stimulation if you have a deep brain stimulation (DBS):
- In other cases, devices should be turned to 0.0 volts and MRI should not be used to image structures of the body lower than the head, not be used to image structures of the body lower than the head, as dangerous heating of the lead could occur.

PAIN MEDICATION	most ore to use, but narcotics medications can cause confusion/ psychosis and constipation if patient is taking MAO-B inhibitor such as selegiline or rasagiline (Azilect), avoid meperidine (Demerol)
ANTIPSYCHOTICS	avoid all other typical and atypical antipsychotics to treat Parkinson's disease psychoses, pimavanserin (Nuplazid), clozapine (Clozaril)
Safe Medications:	Medications to Avoid:
MEDICATIONS THAT MAY BE CONTRAINDICATED IN PARKINSON'S DISEASE	Medications to Avoid:
